Certificate number: **0001159060-02**

Certificate Date: 11 Nov 2017

Assessor details

Accreditation number:	20069
Name:	Paul Brennan
Organisation:	The House Energy Rating Company of Australia Pty Ltd
Email:	info@house-energyratings.com.au
Phone:	9345 0219
Declaration of interest:	Employed by designer of the building
Software:	AccuRate Sustainability V2.3.3.13 SP3
AAO:	ABSA

Overview

Dwelling details

Street:	Unit 10, 51-55 Burraneer Bay Road					
Suburb:	Burraneer					
State:	NSW	Postcode:	2230			
Туре:	New	NCC Class: NatHERS	1a			
Lot/DP		climate zone:	56			
number:	1; 313856	Exposure:	Suburban			

Key construction and insulation materials

(see following pages for details)

Construction:	Fibre-cement Metal roof/Plasterboard
1 1 0	Timber/Slab
Insulation:	R1.5 wall insulation
	Ceiling (uninsulated) R1.0 floor insulation
Glazing:	Aluminium B SG Clear

Net floor area (m²)

Conditioned: Unconditioned:	68.0 2.0	performanc (MJ/m²)	e loads
Garage:	2.0	Heating:	45.0
TOTAL:	70.0	Cooling:	46.0
		TOTAL:	92.0

Annual thermal

Plan documents

Plan ref/date: HM1381 Prepared by: **Hosking Munro Pty Ltd**

The more stars the more energy efficient NATIONWIDE **ENERGY RATING SCHEME** Predicted annual energy load for heating and cooling based on standard occupancy assumptions **92**. MJ/m² For more information on your dwelling's rating see: www.nathers.gov.au

Ceiling penetration (see following pages for c		**NOTE: This total is the maximum number of ceiling penetrations allowed to a
Sealed: Unsealed: TOTAL:**	0 2 2	ceiling (under a roof) for this certificate. If this number is exceded in construction then this certificate IS NOT VALID and a new certificate is required Loss of ceiling insulation for the penetrations listed has been taken into account with the rating.
Principle downlight type	e: No	downlights modelled

-10% SHGC **3.9**

+10% SHGC 3.8

NB: This tolerance ONLY applies to SHGC, the U-value can always be lower but not higher than the values stated on page 2.

If the rating listed above falls below 6.0 stars or the required rating, then the window with this tolerance can NOT be selected.

Additional information

Explanatory notes

About this report

Residential energy ratings address the quality of the building fabric i.e. walls, windows, floors and roof/ceilings. Ratings do not cover the energy or water efficiency of appliances including heating and cooling, hot water, dishwashers, ovens, fridges, TVs etc. or solar panel or water tank requirements. The efficiency or specification of these items is generally covered by other regulations, standards or guidelines.

General Information

A NatHERS House Energy Rating is a comprehensive, dynamic computer modelling evaluation of the floorplans, elevations and specifications to predict an energy load of a home. Not all of us use our homes in the same way, so ratings are generated using standard assumptions. This means homes can be compared across the country.

The actual energy consumption of your home may vary significantly from the predicted energy load figures in the report depending on issues such as the size of your household and your personal preferences, e.g. in terms of heating or cooling.

While the figures are an indicative guide to energy use, they can be used as a reliable guide for comparative purposes between different house designs and for demonstrating that the design meets the required regulatory compliance.

Homes that are energy efficient use less energy, are warmer in winter, cooler in summer and cost less to run. The higher the star rating the more energy efficient.

This NatHERS House Energy Rating report was carefully prepared by your assessor on the basis of comprehensive modelling using standard procedures to rate your home using the underlying engine developed by the Australian Commonwealth Scientific and Industrial Research Organisation (CSIRO).

All information relating to energy loads presented in this report is based on a range of standard assumptions in order to allow for comparisons with reports prepared for other homes and to demonstrate minimum regulatory compliance.

The standard assumptions include figures for occupancy, indoor air temperature and are based on a unique climate file for your region.

Accredited Assessors

To ensure you get a high-quality, professional NatHERS House Energy Rating report, you should always use an accredited assessor, accredited assessors are members of a professional body called an Assessor Accrediting Organisation (AAO).

AAOs have specific quality assurance processes in place and continuing professional development requirements to maintain a high and consistent standard of assessments across the country. Non-accredited assessors do not have this level of quality assurance or any on-going training requirements.

If you have any questions or concerns about this report, please direct them to your assessor in the first instance.

If your assessor is unable to address your questions or concerns, please contact their AAO listed under 'assessor details'. You can also find a range of information about accredited assessors on the AAO websites.

Disclaimer

The energy values quoted are for comparison purposes only; they are not a prediction of actual energy use. This rating only applies to the floor plan, construction details, orientation and climate as submitted and included in the attached drawing set that bears a stamp with the same number as this certificate. Changes to any of these details could affect the rating.
